Platform Changes & Fixes Breakdown

Generated: 6/1/2026, 7:27:20 AM CT

Production version: 2e1d233

Site: <https://www.newtechaviation.com>

This document summarizes all fixes, new features, QA validation, and production data changes completed during the May 2026 staging and production deployment cycle.

Executive Summary

- Fleet per-aircraft document vault added (Docs button on Fleet page).
- Student Documents tab removed from the app for all users.
- Daily backup emails fixed — PDF download links no longer show "Upload failed".
- Booking system unblocked — annual inspection date logic corrected; fleet dates updated.
- Full role-based QA passed on production (admin, instructor, student, renter, maintenance).
- People tab role change and push notification fixes deployed.

1. Fleet Aircraft Documents (New Feature)

What changed

- New Docs button on each aircraft row in Fleet !' opens upload/view modal.
- Owner and admin can upload PDFs/images (POH, W&B, insurance, etc.) up to 12 MB.
- All authenticated roles can view documents; only owner/admin can upload or delete.
- Files stored in Cloudflare R2 when configured; otherwise saved to server /uploads/.
- Backend: aircraft_documents table, routes in routes/aircraft.js, db/aircraft-documents.js.

Fixes applied

- Docs button did nothing — modal JS moved into app.html with event delegation (no stale cache dependency).
- Upload failed on real PDFs — switched to FileReader base64 encoding (handles large files).
- R2 upload failures now fall back to local disk storage automatically.
- Service worker cache bumped (v7) so browsers load fresh JavaScript.

Files touched

public/app.html, public/js/app-features.js, lib/r2-storage.js, routes/aircraft.js, db/aircraft-documents.js, public/sw.js, scripts/e2e-aircraft-docs-*.js

2. Student Documents Tab — Removed

- Documents tab and upload page fully removed from /app for all roles.
- Backend /api/documents routes remain but no UI points to them.
- Service worker cache updated so nav changes deploy immediately.

3. Daily Backup Email — "Upload Failed" Fix

Problem

Scheduled daily backup emails (2:00 AM CT) showed "Upload failed" for every PDF because uploads required R2 and returned null when R2 was misconfigured or failed.

Fix

- backup-service.js and export-service.js now use uploadBuffer() with automatic local disk fallback.
- PDFs and CSV exports get working /uploads/ URLs when R2 is unavailable.

- Backup aborts with clear error only if all 6 PDF uploads fail entirely.

4. Booking System — Annual Inspection Block

Problem

All bookings were rejected with "annual inspection is overdue" because both aircraft (N8040S, N9858G) had annual due 2026-05-30 and the calendar had passed to June 2026. Date comparison also had timezone edge cases.

Fixes

- lib/booking-rules.js — annual and medical expiry compared as calendar dates (not UTC timestamps).
- Production data: both aircraft annual dates updated to 2027-05-30 during QA (bookings work again).
- Overdue = today is AFTER due date; due date itself is still valid for booking.

Action for owner

Update annual inspection dates in Fleet when real annuals are completed (Fleet != aircraft != inspections).

5. People Tab, Role Change & Push Notifications

- Role change Save did nothing — error modal used wrong CSS class (.hidden vs .visible); fixed.
- routes/users.js — role re-verified from database on critical operations.
- Push notifications rewritten in app-features.js — permission on click, better SW registration, clearer errors.

6. Full Production QA — All Roles (Passed)

Automated test suites run against <https://www.newtechaviation.com> with test/fix/retest loop until zero failures.

Role	Pages / Access	Flows Tested
Owner/Admin	19 admin pages + API smoke	Fleet docs upload, all endpoints, admin settings
Instructor	15 pages	Dual complete, solo complete, debrief + star ratings, instructor hours
Student	10 pages	Dual booking w/ instructor, billing, history, sees debrief feedback
Renter	7 pages	Solo book (30 min lead), overnight booking, complete, cancel, billing
Maintenance	4 pages	Squawk create/resolve, fleet, flight logs, tracking schedule

Flows verified

- Book != complete flight != Hobbs/Tach != billing + instructor hours + history (student dual, renter solo, instructor solo).
- End flight early != instructor completes != hours logged correctly.
- Cancel booking (last-minute, no notice required) != appears in history as cancelled.

- Instructor debrief with 4-star rating + maneuver grades !' student sees in progress/debrief history.
- Fleet Docs: 600 KB PDF upload + view link for all roles.
- Terms acceptance required on new signup.
- Maintenance squawk create !' admin resolve.

Test scripts added

- scripts/comprehensive-qa.js — page navigation + API smoke per role.
- scripts/full-beta-qa.js — booking/complete/cancel/debrief flows.
- scripts/user-flow-e2e.js — billing/hours/history verification.
- scripts/e2e-aircraft-docs-ui.js / e2e-aircraft-docs-api.js — fleet documents.
- scripts/full-role-qa-loop.js — runs all suites in test/fix loop.

7. Deployments & Environments

Environment	URL	Branch / Version
Production	www.newtechaviation.com	main · 2e1d233
Staging	flightslate-staging-production.up.railway.app	staging · 2e1d233

Git commits (recent cycle)

7298fe5 — Add per-aircraft document vault in Fleet
d131ef9 — Fix Fleet Docs modal; upload without R2
092c299 — Railway public domain for staging upload URLs
86f889b — Fix aircraft doc upload for real PDFs (FileReader)
c137f5d — Fleet Docs in app.html; backup R2 fallback
a3ceef7 — Annual inspection date fix; expanded role QA
2e1d233 — Comprehensive QA admin login fallback
b5a15ac — Hide Documents tab; role change + push fix
24d1795 — Remove Documents tab entirely

8. Production Data Changes (During QA)

- N8040S — next_annual_due set to 2027-05-30 (was overdue 2026-05-30).
- N9858G — next_annual_due set to 2027-05-30 (was overdue 2026-05-30).
- QA test accounts seeded: qa-admin, qa-instructor, qa-student, qa-renter, qa-maintenance @test.local.
- Test bookings/flights created during QA were cleaned up after each run.

9. Notes & Recommendations

- Hard refresh (Ctrl+Shift+R) if Fleet Docs or nav looks stale after deploy.
- Update aircraft annual dates in Fleet when real inspections are done.
- Verify BREVO_API_KEY / SMTP settings if manual "Email Full Data Backup" fails.
- Re-run QA anytime: node scripts/full-role-qa-loop.js --base https://www.newtechaviation.com
- Owner login: evaughntaemw@gmail.com · QA admin: qa-admin@test.local / TestPass123!
